

# TerraLink Mini (M)

THE SMALLEST H.265 LIVE STREAMING  
IP-ONLY ENCODER

## Description

The TerraLink Mini encoder supports smaller broadcasters and content owners who want to broadcast live video but do not want to invest in costly large-scale solutions. This new product from Mobile Viewpoint proves smaller players can meet today's tier-one demands for live online video. Also available is the TerraLink Mini-M, a mobile version with two integrated modems and an internal removable battery. The Mini-M fills the gap between a laptop and a full-size bonding encoder.

With Mobile Viewpoint's LinkMatrix portal, TerraLink Mini enables the creation of a complete web channel featuring playlists, graphics, leaders and insert ads.

The TerraLink Mini encoder is small enough to fit in your pocket. Its H.265/HEVC encoder allows broadcasters and content owners to go live from any location. Its USB port allows users to connect modems that can support cellular connections, enabling the streaming of superior-quality live video from any location where there is mobile connectivity. The TerraLink Mini is compatible with Mobile Viewpoint's portfolio of production and delivery solutions such as LinkMatrix, a web-based video management portal. Also available is the TerraLink Mini M variant with two integrated 4G modems.

## Specifications

### INPUTS

- 3G-HD-SDI

### POWER

- 5000maH

### CONNECTIVITY

- 1x Ethernet
- 1x WiFi
- 3G/4G (5G); (optional)

### INPUT RESOLUTION

- Full D1
- 720p50, 720p59.94, 720p60
- 1080i50, 1080i59.94, 1080i60
- 1080p30, 1080p50, 1080p60

### TRANSMISSION BANDWIDTH

- Max 12 Mbit

### BONDING CONNECTIONS

- Max 6

### AUDIO

- Embedded AAC 96kbps
- Audio return via analog mini jack or dedicated IFB app
