The Airlink is our wearable ruggedized transmitter that can transmit 1 up to 2 video streams at H.265/HEVC and bonds 8 combined 3G/4G connections for high quality live streaming using Mobile Viewpoint award winning bonding technology. H.265 live video transmission offers the same quality at lower bandwidth consumption, but also saves money at data cards. It is also possible to add Wi-Fi and Ethernet connections to maximize the upload capacity.

**OPERATIONS SETTINGS**
- Live: Adaptive encoding and bitrate change with three options or with a slider (optional), with configurable delay between 1-60 seconds
- Upload; send over contents of an USB stick to a FTP server
- Recording: CBR encoding at 30 Mbit on internal or external SSD disk
- Satellite + 3G + BGAN: Specific modes to optimize transmission over BGAN and KA satellite. With Satellite + 3G we can keep the delay at 1.8 seconds using 3G/4G modems for the return channel and IFB
- Stand by/Data bonding: In this mode the unit is a true data bonding unit for high speed uploads and Internet access. Also in the other modes data connectivity is available but live video gets prioritized
- PostPro license (optional): In this mode the system records next to a high res CBR a low res proxy file which can used for remote editing and only partial retrieve
